The following is an examiner's statement of reasons for allowance: The closest prior art, Terry, formerly relied upon does not teach or fairly suggest exposing an organosilicate dielectric material to a halogenation reagent; an alkylation reagent and a termination reagent. The silicon dioxide contamination referred to in "III. RESYULTS NAD DISCUSSION" of Terry would not be sufficient for those skilled in the art to view the material referred to as an "organosilicate dielectric" and in any case the silicon dioxide contamination of section II appears to have been generated subsequent to exposing an organosilicate dielectric material to a halogenation reagent; an alkylation reagent and a termination reagent as set out in the paragraph prior to section "III" of Terry.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
